

PhotoFacial

In our **PhotoFacial** treatments, two lasers are used as necessary and indicated:

- Lumenis M22 IPL (intense pulsed light) and
- Candela v-beam (pulsed dye laser)

These lasers selectively absorb into pigmented and red skin lesions to gently clear the skin and deliver the energy deep into the skin, needed for collagen stimulation and new collagen formation. The PhotoFacial addresses the following skin concerns:

- Sun damage
- Redness
- Pores
- Pigmentation
- Small Vessels
- Overall appearance of the skin

The PhotoFacial does not address skin cancer or pre-cancerous skin lesions, melasma, deep pigmented lesions or other conditions. Other treatments are available for these forms of skin ailments.

The face, neck, chest and hands are most popular areas of treatment. The back, shoulders, arms and lower legs can also be treated.

A series of 3 sessions is usually recommended to achieve best results. A pre-paid package of 3 treatments is 10% off the single treatment price.

Treatment may be performed by Dr. Rubinstein, Physician Assistant, Nurse Practitioner or Registered Nurse. Even though the same lasers and treatment protocols are used, the cost varies depending on the provider.

Our lasers are maintained under warranties with the original manufacturer with original parts. This ensures consistent, safe and effective results.

Prepare for your treatment: Discontinue use of retinoids one week prior to the treatment; no sun exposure two weeks before and after treatment.

After your treatment, some redness and sunburn effect may be present; freckles may appear darker for up to 10 days. Make-up may be used immediately. Full instructions and precautions will be provided on procedure day or may be requested ahead of time.

V-Beam Pulsed Dye Laser may be used alone to treat redness, scars, or other skin conditions with underlying vascular malformation (anything red). 3-5 treatments are usually recommended and maintenance treatments may be required. More treatments may be necessary for port wine stains or other conditions.

Skin care products such as antioxidants, growth factors, retinols and sun protection help maintain results and prevent further skin damage. Schedule a post treatment consultation with our skin care consultant to design your individualized skin care regimen or start with **RUBINSTEIN|MD** Anti Aging Regimen available at www.LAskinMD.com/shop

As you acquire new damage and aging in the years to come, it is recommended to have a maintenance treatment annually. One maintenance treatment per year is usually sufficient to maintain results. The costs are as follows:

PHOTOFACIAL TREATMENT AREA	Dr. Rubinstein, Dr. Habashy Eric Lovato, PA-C		Heidi K., RN, Karen Landy, NP Jessica Kramer, PA Simona Fikhman, PA	
	Single Session	Series of 3 Save 10%	Single Session	Series of 3 Save 10%
